

@lantic launches ADSL Evolve

@lantic, a subsidiary of Vox Telecom, has launched ADSL Evolve, a new product that will help existing dialup customers migrate to a faster ADSL connection at a price comparable to their existing dialup subscription.

"ADSL Evolve makes ADSL services accessible and affordable to dialup customers by providing the customer with an all-in-one ADSL access solution without the initial upfront investment. ADSL Evolve includes a 384kbps ADSL line and router," said Dederick Venter, sales and marketing director at @lantic.

Pay only for data used

ADSL Evolve is priced at a monthly subscription fee of R60.00 over 12 months and data usage is charged at 10 cents per MB. Dialup customers will now be able to pay only for data they use instead of being billed for every minute they are online. This means that customers will save monthly on their ADSL subscription with the discounted line rental. To activate the ADSL Evolve service, a once off fee of R99.00 is charged.

The router supplied with the ADSL Evolve package is linked at an auto configuration server making it a simple plug and play solution. The router is a single port Billion 5210s RC router/modem, but customers do have the option of upgrading the router to a Billion 5200G RC 4 port wireless router for an additional R30.00 per month subscription and R50.00 setup fee.

Other features include VoIP compatibility and 100MB Hotspot data per month at designated Hotspot/Wi-Fi zones such as local airports, hotels and coffee shops marked with the Always-On Wi-Fi logo.
