

Neutrog Fertilisers boast with a fresh new look

Neutrog Fertilisers produce a range of organic and semi-organic fertilisers for use in home gardens. The products are all based on composted poultry manure, which is a one of nature's oldest and most trusted sources of minerals and nutrients.

Plants absorb the nutrients from the soil as and when needed, rather than being 'force-fed', as is often the case with chemical products. Using a Neutrog fertiliser in your garden will improve the overall health of your soil and in turn of your plants, shrubs, grass and trees.

Neutrog is excited to be launching a new look for their product range. The bright and eye-catching new foil bags will make it easy to grab your favourite Neutrog fertiliser off the shelf. More importantly, the foil bags contain the smell of that essential chicken manure component and will keep your fertiliser fresh. The full range of Neutrog Fertilisers have been repackaged with this striking new identity - Bounce Back (green top band), Rapid Raiser (red band), Blade Runner (blue band), Sudden Impact for Roses (dark red band) and Seamungus (dark blue band).
