

A global EV taxi revolution

The first step in a global electric taxi revolution was in 2013 when a taxi company in Japan went all in and converted its entire fleet of conventional taxis to zero-emission Nissan LEAFs.

Since then, taxi companies in Spain, The Netherlands, Hungary, the UK, Jordan, Mexico and Poland have all adopted zero-emission Nissan electric taxis. Today, Nissan taxis – LEAF, e-NV200 or both – are in service on five continents, 26 countries and 113 cities around the world.

Reduced emissions, significant savings, and cheaper maintenance for taxi companies some benefits of electric taxis.
