## Easygenerator

Easygenerator is a cloud-based program that will help you create a variety of efficient and unique help manuals. You can use this to edit different modules and programs while also working with different question types when you are trying to ask your users what they are trying to get out of your system.

## Lectora Online

This web-based program is a collaborative option that lets you adjust your user guide programs with a variety of others within your workplace, thus ensuring your data will be edited as required. This program particularly uses an online desktop authoring system that lets you adjust your guides through a web browser while integrating itself into any LMS you are trying to operate. The setup for Lectora Online is simple and should be easy to control when you are trying to get your online manuals ready for use.

## Elucidat

Elucidatis an HTML5-based program that can help you work with any device when getting help manuals ready. This help authoring software is fully accessible through your web browser.

This will allow you to import your brand to any kind of program you are using. You can match the brand with everything you are using to ensure that your guide will have a consistent look without throwing anyone off while reading it. This also allows you to adjust the index for your user guide on the fly.

## ZebraZapps

Designed by Allen Interactions, ZebraZapps is a program that lets you create user guides on the cloud. This program helps by analysing your use of colours, the charts you are adding and so forth to give you more control over what you are trying to engineer at any given time. When used right, this will help you get the most out of your program so you will have the best possible connections available.

You can create sketches of any kind of page you want to work with. This in turn will help you get the most out of your user guide so it will not be too hard for you to try out.

## **Amovet Publish**

Amovet created this cloud-based option that has become one of the top online help authoring tools to take a look at right now. The Amovet Publish program was designed primarily with classroom module construction features in mind but it has especially become a popular choice for all those who are trying to get different types of manuals created

The Amovet Publish program is designed to help with creating unique forms of content through the use of interactive points that can be programmed in the middle of a setup. This can help with creating in-guide help points that may be added into an online manual. This is a popular option among those who are trying to work with contextual help services.

## **Artisan**

Artisan is a program made by Bankers Edge that allows you to create help programs through a variety of modules. People can choose from all sorts of modules within the setup and can even create new templates and schemes all around the place. These include options that may be kept consistent around the entire body of a user guide depending on your preference for making these features work in your setup.

Be sure to try out these online help authoring tools if you need assistance with getting your help manuals ready. These tools should be easy to figure out while also being accessible from a variety of places so people will have an easier time understanding what you can get out of a good program.

## **ProProfs Help Authoring Tools**

This is not a wiki, blog, or HAT, but a fully customisable, easy-to-use documentation website that lets you create online documentation, user guides and manuals. You can add overlays, tool-tips and pop-ups in to your online documentation. There is no need for downloads, installations or XML. The web-based software allows for instant publishing and team collaboration.
