Green IT summit Africa 2013

Going green, an opportunity for improvement. Green IT is not a problem, it is a solution.

Accelerate your sustainability business strategy. Increase efficiency. Improve your bottomline.

Highlights:

Spiraling energy prices, incoming legislation, new reporting requirements such as King III, political and growing consumer awareness are all becoming key factors in the move towards more sustainable business.

The summit will address critical issues involved in using environmentally sustainable computing.
It will examine the study and practice of designing, manufacturing, usage, and disposing of computers, servers, and associated sub-systems - such as monitors, printers, storage devices.

It will also deal with networking and communications systems-efficiently and effectively with minimal or no impact on the environment.

Three-day conference featuring:
Five comprehensive conference tracks, with 20 sessions our agenda also features several special sessions providing opportunities to learn from and interact with analysts, industry experts and peers, and top solution providers:

Keynote sessions:
Typically presented by industry leaders, these plenary sessions are designed to be entertaining and thought-provoking.

Workshops:
Presented by guest experts, these intimate workshops provide an opportunity to drill down on specific "how to" topics in an extended, small group environment. Sessions designed for end users only. Registration required.

End-user case studies:
We invite a number of end-users to personally present leading-edge case studies and answer questions.

Magic quadrant sessions:
Magic Quadrant Show Floor Theaters held on the exhibit floor deliver timely research on key vendors and market conditions.

Analyst one-on-ones:
Sit privately for 30 minutes with a analysts specialising in the topic you'd like to discuss. Many attendees tell us that a one-on-one session is worth the price of admission, all by itself.

Analyst-user roundtables:
Hear how your colleagues from various industries tackle problems similar to yours. These small group discussions provide an informal setting for you and your peers to share insight, challenges and concerns on today's hottest topics.

Solution provider sessions:
In these moderated panels, vendors and end-users share experiences and "lessons learned" from real implementations.

Three-day expo providing:
A complete one-stop-shop for senior ICT and business decision-makers to identify environmentally-friendly technologies, green innovations and socially responsible suppliers that can help them rise to these new challenges.

Enhanced branding activities for sponsors.

The participants will gain fresh insight and perspectives outside their organisations and take home a network of valuable new contacts.

They will enjoy extended networking and meaningful conversations during special events.

Learn from the key players offering cloud products and services.

Participants will also take advantage of the green nature of the event.

Green ICT-Infovision Awards will take place on the last day of the event.
