

New free digital learning platform from BCX

BCX has launched a digital learning platform designed to propel South African education into the future by providing free access to online educational content.

Learners, educators, school administrators and parents will be able to access maths and science learning material at BCXLearn.com, with no charge for the content.

“BCXLearn.com will revolutionise the way schools approach technology and teaching, and will remove barriers to learning for schools and learners,” says Ian Russell, CEO of BCX. “Learners will have free access to education services and tools, as well as all the material in the standard national curriculum – from Grade 4 to Grade 12.”

To empower learners and enable them to study outside the classroom, BCXLearn.com will also feature supplementary interactive educational material.

The platform also gives schools the opportunity to create their own websites and tailor-make content to suit their environment - free of charge.

In addition, people who access BCXLearn.com through the Telkom network and mobile will not pay any data costs.
