New printer from Gestetner

Gestetner South Africa unveiled its Pro C900, the flagship of the company's Pro line, on Thursday, 2 April 2009. Described as delivering high-quality professional imaging and a complete portfolio of online finishing options, central to the operation of the printer is a server-based EFI Fiery controller. This is supposed to allow the Pro C900 to maximise ROI by managing speed, quality, advanced colour management and variable data printing.
