

UK to reverse SA travel red listing

Britain will remove all 11 countries from its Covid-19 travel red list from Wednesday (December 15) because there is now community transmission of Omicron, health secretary, Sajid Javid said.

The British government added the southern African countries to its red list in late November, meaning that entry was only allowed to UK citizens or residents who then were mandated to quarantine in a hotel, in a bid to slow the spread of the Omicron variant.

"Now that there is community transmission of Omicron in the UK, and Omicron has spread so widely across the world, the travel red list is now less effective in slowing the incursion of Omicron from abroad," Javid said.

"While we will maintain our temporary testing measures for international travel we will be removing all 11 countries from the travel red list effective from 4am tomorrow morning."

Covid-testing in force

Britain requires all inbound travellers to take either a PCR or a rapid lateral flow test a maximum of 48 hours before departure.

Transport secretary, Grant Shapps said these testing measures would be reviewed in the first week of January.

"As always, we keep all our travel measures under review and we may impose new restrictions should there be a need to do so to protect public health," he said on Twitter.

The 11 countries which will be removed from the list are Angola, Botswana, Eswantini, Lesotho, Malawi, Mozambique, Namibia, Nigeria, South Africa, Zambia and Zimbabwe.
