Introduction

Marin's & the Lamà

Marin's was founded as an advertising agency in Paris, France more than 20 years ago.

Marin's was already known as a very creative agency for all kinds of POS display material.

In *1997*, in response to its customers' requests, Marin's created a standard column, which combines an accommodating folding-unfolding value as well as an automatic opening to the appropriate dimensions and allowing the optimisation of print and material.

François L'hôtel decided to protect his invention with a ***worldwide patent.***

From that time, Marin's has chosen to focus on and be dedicated to ***the Lamà*** and to its development, whereas its competitors were too generalistic in their applications... sometimes unfair in the counterfeiting.

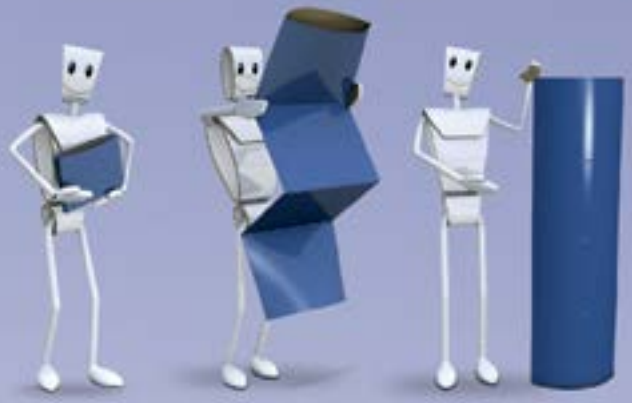
The original concept benefits from a constant development in its sizes and options to offer an extensive range of smart and attractive products.

The clients' expectations kept Marin's creating new environments, new applications generated a constant willingness to defend its intellectual property rights. The concept is now international: the French Lamà has seduced the whole world...

- *1999:* First licensee in Spain and Belgium.
- *2001:* New licensee in Brazil, Canada, USA, Hong-Kong and Japan.
- *2003:* New licensee in Mexico, India, Italia, Finland, Russia, Norway, Sweden & Colombia.
- *2004:* New offices open their doors in Argentina and in Central Europe.
- *2005:* New licensees in Middle East, Maghreb & Chili.
- *2006:* Marin's is in Greece and in Venezuela.
- *2008:* Marin's is now represented in **Southern Africa** and in the Balkans.
- *2009:* Marin's opens a Birmingham-based subsidiary for United Kingdom and Ireland. The range now includes two new shapes : Pyramid and Hexagon.
- *2010:* Marin's is reorganizing its structure in the US by signing up five new licensees. Each of them have their own production capacity. New licensees in New Zealand and in Australia.

Marin's is the ***worldwide leader*** *of foldable instant display. Thanks to its worldwide network of licensees, Marin's is now represented in* ***more than 100 countries*** *and has* ***30 production centers*** *within this network*

Introduction
The Lamà & its assets



The Lamà is a patented cardboard display system that opens automatically into position.

The 3 main advantages of the whole range are:

- ***Transport cost savings***
- ***Easy installation***
- ***Value for money***

The ***optimisation*** of its range of products enable Marin's to give a response to any customer's request in an unexpected time frame while other custom built applications could not.

Every column can be assembled and linked together to deliver even higher, wider, greater modules.

The Lamà can hold products and improve brand presence in every retail sector.

Its folding nature, packaging and its easy installation offers the Lamà obvious advantages.

The all Marin's network is able to produce the whole range with great respect of the set ***quality criteria.***

This enables Marin's to respond to any of the global corporations needs.

Introduction
The Range

Marin's gives its clients the possibility to reinforce their presence in retail stores with a ***wide range*** of products from counter displays to 3 meters/10 feet high columns.

The product range is based on standard heights, widths and space saving yet easily personalised with additional graphical options, die cuts, lug-on, leaflet dispensers, etc.

The promotional kits combine ***space saving, handiness, fast installation*** and ***brand enhancement*** to grab the shopper's attention in helping the shopper to interact with the promoted product.

The Lamà range of tables, arches, rings and pallet surrounding immediately sets your brand apart delivering the in-store impact to generate ***shopper attention.***

If you wish to display your products, you may choose one of our ***Lamàstock*** depending on the quantity, the size and the weight.

Your local Marin's contact can help you choose the best solutions from the core range, whilst our ***Research and Development Team*** are at your disposal to develop unique and bespole solutions to your changing and challenging requirements.

Introduction

A Patented System, An unequalled Brand

The ***system embedded*** in each product of the Marin's range is ***widely protected*** under international intellectual property rights.

The Lamà is a quality product and manufacturing processes have been implemented to ensure that the Lamà remains 'fit for purpose' throughout the promotional period.

All ***30 production centres*** are committed to following the manufacturing processes as established by Marin's.

100% Patented

The Environment

A unique vision: firm achievement within environmental rigour

Marin's was created more than 20 years ago. The past 10 years have been those of the international development around a concept which has proven its total adequacy with the display market.

From the very beginning, as well as meeting fundamental customer's quality and ***easy to install*** expectations, the Lamà already had obvious environmental qualities which were underrated.

As Marin's is highly concerned by ***environmental*** issues, its production is focused on friendly environmental processes: easy to sort and recyclable materials, ***PEFC*** (Program for the Endorsement of Forest) certified origin of cardboard, efficient supply chain thanks to optimised dimensions.

A simple CO^2 study gives rise to savings during transportation. For instance, in order to respond to customer's demands, the weight/volume ratio on ***transportation*** of its displays allows Marin's to ***reduce*** the number of trucks ***by 5.***

To sum up, it is important to underline the following:

- As it is made of paper and natural latex, the ***Lamà*** concept is inherently recyclable.
- As it is ***foldable***, light and it has packaging compactness, transportation of the Lamà ***minimise*** greenhouse gas emissions.

Although, Marin's will always develop ***qualitative solutions*** which respond to customer's need within any environmental issues.

That is why our ***Research & Development Team*** does not stop looking for new raw materials notably regarding printed cardboard surface treatments; inks, laminations, varnishes and glues are being tested to rapidly get a ***100% recyclable Lamà.***

A P.O.S display is a disposable product, our Lamà will never be the source of pollution; we strongly commit ourselves to follow this route...

The Environment

Floresta Lamà

FlorestaLamà is a fantastic project initiated by Marin's in Brazil. The main idea is very simple: planting trees to compensate for the quantity of paper used for the manufacture of Lamà. Marin's is thus purchasing seeds and ensuring the maintenance of the site located in Itù, near Sao Paulo. This initiative is managed in partnership with SOS Mata Atlantica, a well respected NGO, which between other duties will ensure the daily management of the site and issue reports of the maintenance of the area.
