

TV operators need to look beyond piracy

Conax, part of the Kudelski Group and a leader in total service protection for digital entertainment services worldwide via broadcast, broadband and connected devices, announced at the TV Connect Africa conference, that Conax' EVP Principal Architect and industry expert, Tor Helge Kristiansen, will advise conference participants about the dangers of a new generation of piracy exemplified by the rapid development of the "Internet of Things".

Tapping 25 years of conditional access and value chain experience, Kristiansen will share critical insight on pay-TV security during a special conference track dedicated to piracy "Combatting piracy across Africa", on Day 2 at the TV Connect Africa conference.

"A completely new breed of pirates and variety of attacks – far from content security redistribution, but connected to hybrid set-top-boxes - are a growing threat for pay-TV operations," says Kristiansen.

"At the TV Connect Africa conference, I'll address the newest dangers for operators and the measures operators can take to prevent these new threats."

Already securing over 30 DTH and DTT operators across Africa, Conax is both a trusted partner and a leading driver for Africa's pay-TV expansion. With a strong regional track record in secure digital migration and innovations for robust operator roadmap, Conax is continuing its strong commitment to the African market by providing pay-TV operators with

future-ready solutions and the expert guidance to build their business into the future for next generation consumers.
