

Phygital: 6 ways to adapt, or die

Innovative phygital business models, where bricks and mortar and digital seamlessly integrate, are popping up across the globe. But the best phygital experiences still remain aligned with old-school sales strategies: customer attraction, retention, engagement, experiences, loyalty and the brand itself.

The factors that keep shifting are shopping behaviour and new technology. The upshot is: to keep in the retail game, phygital is the way to go and it's currently an adapt or die situation.

1. The agile store

“Due to the shift towards home delivery, traditional supermarkets will soon be in serious trouble.” Nils Van Dam, Duval Union Consulting

The concept of the role of a physical shop has changed. Whereas before a storefront used to be a part of the shopper psyche there are now young customers who have no knowledge of physical stores dominating the landscape. Nils Van Dam of Duval Union Consulting estimates that between [30 to 40%](#) of supermarkets will shut their doors within the next decade. In line with this thinking, [according to PWC](#) 59% of the consumers surveyed in China will be buying grocery goods online within the next year.

SALES

2. Retail business model disruption

“To meet the rising demands of the customer, retailers need to disrupt their business models and redefine

the customer experience.” Agné Vezbergiené, director consumer products and services at Deloitte

Never seen or experienced before phygital stores are being built, the biggest ones being Amazon and Alibaba. These mega-online players are laying new foundations with brick-and-mortar shops - Wholefoods and Hema respectively. The rule of thumb seems to be: whatever bases you're not covering, cover.

Another thing to note about disruption is that agility and adoption are different in terms of what product you sell. For the online retailer thinking of transitioning to phygital, the importance lies in what you sell. According to PWC, in a category such as fashion, [43% of consumers](#) already consider themselves to be omnichannel shoppers, buying both offline and online. In the same survey, for consumer electronics, 21% of shoppers even indicated to be purchasing strictly online.

Toros Esim 27 Mar 2019

3. Different strokes for different folks

"Generation Z will soon become the largest generation in the workplace and marketplace. Brands who get know them now are destined to be the disruptors of tomorrow." Bart Schaller, CMO, Synchrony

Quite surprisingly, another reason for bricks and mortar may be Gen Z. Not because they love shopping malls but because they demand that every option is available to them. Seventy-five percent of Gen-Zers [surveyed](#) by Newsroom Synchrony say they prefer shopping in stores with engaging experiences, while 41% say the experience of buying something is as important as the product itself.

As Nicolas Van Zeebroeck, digital strategy at Solvay points out, "Sometimes you want to have the stuff right away or to have a personalised advice and here we are happy to have a physical store."

Another interesting fact about Gen Z is that if they have a product in their shopping cart while shopping online, they expect this to be seamlessly integrated into their in-store shopping experience.

The pattern of buying behaviour from physical/phygital shops in terms of [Gen Z's shopping habits](#) is as follows, although these stats do not include the shopping habits of China:

- 90% Groceries
- 66% Furniture
- 63% Household items
- 59% Shoes and accessories.

4. Covering all bases

"I had only one superstition. I made sure to touch all the bases when I hit a home run." Babe Ruth

Agile retailers are upping the ante with online and in-store technology. The more common in-store phygital tech includes self-scanning, digital signage tablets and smart tags. Other innovations being tested are thin like AR-powered virtual demos, smart mirror beacons, personal in-store digital avatars, face-detection software that can guess a shoppers' gender and age, as well as interactive fitting rooms with a touch screen.

TECHNOLOGY

The power to know: How data science is transforming retail

Marko Salic 23 Jan 2019

5. Uber-experiences

"Food becomes the new fashion." Franco Savastano, Jelmoli

A bricks and mortar store should look to incorporate whatever the “new fashion” is – be it cooking workshop or yoga. For example, Green Swan the owners of Intertoys, plans to rent out toys for children’s parties. Alibaba has opened the doors of its latest phygital venture: [The FlyZoo Hotel](#) in Hangzhou, with the seamless customer experience all being underpinned by its own technology.

And for the ultimate in-store trend, see the 185-year-old “most beautiful department store” in Zürich – Jelmoli. This old-school bricks and mortar retailer has [ten large and small restaurants](#) where they can grill your steak for 90 seconds at 800 degrees. Or you can visit the Cheese Humidor cellar where there are 25 cheeses to choose from.

RETAILERS

6. The human role

"There are about 120,000 informal spaza stores with sales estimated at between R100 billion and R200 billion." GG Alcock, the KasiNomic Revolution

Keeping it real and human with bricks and mortar is particularly relevant to South Africa. We’re a fascinating demographic of shoppers who, on the one hand, consider a trip to the mall a memorable family experience and on the other, many of us shop “off the radar”, buying from spaza shops in townships and rural areas all belonging to stovels.

In both instances, the human connection is vital to the shopping experience. Malls may need to up their game on the experiential level and spaza shops should be taken more seriously by mainstream retailers.

ABOUT EBEN ESTERHUIZEN

Eben has over 20 years retail, pharma & FMCG experience in South Africa. He understands consumer & shopper behaviour patterns, and is an expert in CE. Eben is passionate about delivering bottom line success for brands in retail. A champion for innovation, as General Manager at The Pharma Group, Eben is continually developing both himself and his team to deliver excellence in the marketplace.
