

How to make your next holiday better for the environment

Being an environmentally friendly tourist can be challenging. Tourism is an industry that brings many [negative environmental impacts](#) - our pleasure often comes at the expense of local habits or wildlife.

Maya Bay on Thailand's uninhabited Phi Phi Leh island became famous as the location of the 2000 Hollywood movie *The Beach*. But this led to rapid growth in visitors to the bay – as many as 8,000 a day at peak – and put enormous strain on the bay's natural habitats.

In 2018, the bay was [closed to tourists](#) for four years to let its coral reefs and wildlife recover.

But tourism can also be an inspiring way to connect with oneself, with others and with new places. As tourists, we can learn, share and contribute to positive environmental practices.

As a tourist, you also have influence. The money you spend, the social interactions you have and the resources you consume all [help to shape an area](#).

So here are four pieces of advice for making your next holiday better for the environment.

Spend locally

We've all heard variations on the mantra "[take only memories, leave only footprints](#)". This message of less consumption and lower impact is a good ethos for environmentally sensitive tourism. The first thing to do is think about how you can leave more positive footprints behind.

An excellent way to make the most of your economic footprint is to stay and shop in [independent](#)

[businesses](#). These businesses tend to pay local taxes and are owned by and employ local people. More of the money you spend stays in the immediate area as a result.

Where tourist money directly benefits local people and businesses, their support for conservation is [often encouraged](#). Tourists [visiting rhino sanctuaries](#) in Botswana, for example, bring income and support jobs. In 2010, the country's Khama Rhino Sanctuary employed 26 permanent staff and many more casual labourers.

This economic security can, in turn, prompt local people to appreciate the importance of protecting vulnerable animal species like rhinos. [Separate research](#) on people living around Kenya's Maasai Mara nature reserve found that people whose livelihoods were dependent on tourism were more likely to support efforts to conserve local wildlife.

Tread lightly

Tourism creates waste and uses up resources. Treading carefully will minimise the environmental impact you have on your holiday destination.

A simple way to lower your environmental footprint is to use fewer resources at every stage of your holiday. A single tourist uses [300 litres](#) of water in their holiday accommodation on average each night. Reusing towels, flushing the toilet less and shortening your shower time can all help to reduce demand for water resources.

Thinking about the footprints you leave as a tourist is a useful mindset. You may even become more aware of the positive legacy you can leave behind.

Learn about the local area and the environmental issues that matter there. If habitat loss is a problem, contribute to local organisations that support conservation. Organisations like the [National Trust](#) even offer holidays in the UK that help to fund their work.

Place matters

Tourism shifts you away from the familiar and gives you [space for self-reflection](#). Research has found that people have been [inspired by travel to make life changes](#) such as relocating or shifting career.

Many keen rock climbers, for instance, adopt a [minimalist and mobile lifestyle](#). [One study](#) on climbers' lifestyles in the US showed that the challenges of life on the road, gatherings at campgrounds and the considerable amount of time spent in nature can be enriching.

Rock climbers' lifestyles are inspired by and connected to natural settings. And many alternative types of tourism are too. These tourists can become powerful advocates for the protection of the places they care deeply about. Surf tourists, for example, have driven [various campaigns](#) against the discharge of sewage into UK bathing waters.

You and those you travel with can be similar cheerleaders for the places you care about. Join organisation fighting for their conservation, contribute to their sustainable development and share your appreciation of these places with others.

Stay curious

A final thing you can do as a tourist is to keep exploring. It can be tempting to stay in a [tourist bubble](#) and r leave the confines of your resort or stick with familiar travel groups and activities.

Cruises are a classic example of bubble tourism. The places visited do not really matter; the floating hotel the main attraction.

But cruise tourism rarely benefits local populations and brings [significant negative environmental impacts](#). the Trujillo Bay area of Honduras, for example, [increases in garbage and sewage](#) have been reported since commercial cruise tourism began operating in the area in 2014.

Similar concerns have prompted calls to restrict cruise tourism in popular European destinations like [Venice](#), [Marseille](#) and [Barcelona](#). In 2022, more than 50,000 people signed a petition to ban cruise ships from

Marseille.

Going beyond familiar or fashionable tourist bubbles can help you avoid such negative associations. [Short haul city breaks](#) are a more environmentally friendly option.

Travellers to these destinations are more likely to use means of transportation that are associated with [les: CO₂ emissions](#) than long-haul travel, such as [trains or coaches](#). And in urban areas, their activities are likely to take place in a concentrated geographical area.

Thinking about the footprints you leave and the memories you take can help you to become a more environmentally aware tourist. Leave positive imprints behind, tread carefully, put yourself out there and keep exploring.

This is a mantra to adopt and share with your travel groups to get the most out of your holiday experiences while simultaneously reducing your impact on the planet.
