

## Quick recycling offered by EeZeeBin

A newly introduced waste collection system, EeZeeBin, from Interwaste Environmental Solutions allows for the collection of recyclable materials including paper, cardboard, plastic, glass and cans. All can be deposited into a single bin without any further sorting and separation.

The bins can be used by corporates, schools, universities, event companies and others that are interested in keeping the environment safe, as 60% of the rubbish that is discarded can be recycled. The bins provide branding opportunities to highlight businesses that are concerned with conserving natural resources and protecting the atmosphere.

"Dedicated collection vehicles are employed to regularly collect and compact waste before transporting it to the Materials Recovery Facilities Company (MRF) for final sorting and reprocessing. 6m<sup>3</sup> bins are available for use at high volume generation points with 240 litre wheelie bins for smaller loads," said Jason McNeil of Interwaste.
