

On track with new GPS fleet software

Telogis has released OnTrack 5, its latest real-time GPS Fleet Tracking solution. The new features in this release include Routing, Find Nearest, Giant Maps, and Quicklinks.

"One thing we hear from our customers is they want the ability to dispatch from their GPS Tracking software," said Jason Koch, Senior VP of Products for Telogis. "This OnTrack provides routing, an enhanced dispatch tool called 'Find Nearest', and Giant Maps suitable for large dispatching plasma or LCD display monitors. OnTrack 5 helps companies manage their fleet in real-time."

Highlights of the OnTrack 5 release include:

- Routing - The routing technology allows dispatchers to generate and optimize routes in OnTrack as well as send turn-by-turn directions to drivers in real-time.
- Find Nearest – This new tool allows users to quickly identify closest vehicles to a location and dispatch turn-by-turn driving directions to the driver of that vehicle.
- Giant Maps – The rich mapping inside OnTrack supports maps of any size. Perfect for plasma or LCD monitors up to 42" diagonal.
- Quicklinks – A significant AJAX menu enhancement that gives users the ability to customize the menu structure and get more workspace in the application.

Telogis OnTrack is available in three editions - Standard, Professional and Enterprise.
