

# COHSASA is accredited for a fifth time

Issued by [COHSASA](#)

20 Dec 2018

The Council for Health Service Accreditation of Southern Africa NPC (COHSASA), has achieved its fifth accreditation from the International Society for Quality in Health Care (ISQua), the global authority with a mission is to improve the quality and safety of healthcare worldwide.

This fifth accreditation, valid from 2018 to 2022, means that COHSASA itself, as an organisation, has been independently assessed by the most credible authority in the world in this field and has had its existing systems and operations validated. The process does not end there as the aim is to drive continuous quality improvement throughout the organisation.

COHSASA is the only health services accreditation body in sub-Saharan Africa to be accredited by this ISQua.

COHSASA has achieved accreditation from ISQua in 2002, 2006, 2010, 2014 and now in 2018. This latest accreditation further focuses attention on this not-for-profit organisation that will be co-hosting ISQua's 36th International conference in Cape Town, the first time that the conference will be held on African shores.

Furthermore, the COHSASA Healthcare Facility Standards (First Edition) has also achieved ISQua accreditation for the period of 2018 to 2022.

The ISQua surveyors gave the COHSASA Healthcare Facility Standards a rating of 89% and described the result as "excellent". This was the first survey of this suite of standards which includes: Generic Service Elements, Inpatient Care standards and Ambulatory Care standards. These standards are an amalgamation of six existing sets and they have been combined to provide consistency and reduced duplication.

Based in Cape Town, the Council was founded in 1995. In the past 23 years, it has worked with 594 healthcare institutions across 35 clients in 11 countries in Africa. Using professional standards, COHSASA identifies gaps in service provision and assists healthcare staff to meet those gaps.

The Council empowers health workers to ensure that there are systems and processes in place, underpinned by professional standards, so that patients are provided with safe, quality care.

Commenting on the latest accreditation, CEO of COHSASA, Ms Jacqui Stewart said:

"I am absolutely delighted that COHSASA has been accredited by the International Society for Quality in Health Care (ISQua) for a fifth time and has achieved accreditation for twenty consecutive years. This accreditation is an indication of excellent team work within the organisation, high quality systems, a commitment to our mission, vision and values and most important, a commitment to our clients.

"I am pleased that our healthcare facility standards have also been accredited for four years. We now have just two sets of standards, healthcare facility standards for inpatient care and ambulatory care. These two flexible sets enable us to better respond to requests to accredit facilities delivering new approaches and models of health care. We are committed to maintaining high quality programmes and services for all our clients for many more years".

Chairperson of COHSASA, Ms Sharon Slabbert said of the latest accreditation: "The Council of Health Services Accreditation of Southern Africa has for the fifth time been accredited by the ISQua following a rigorous process of evaluation. This clearly indicates that the Council is striving towards its vision of being the leading health service accreditation organisation globally. This is only possible through the total dedication and hard work of the CEO and staff. It

is through absolute adherence to the principles of the highest standards of quality in the provision of healthcare that this remarkable achievement has been made possible.”

Elaine O’ Connor, ISQua Head of the International Accreditation Programme and Strategic Partnerships CC, said: “ISQua warmly thanks and congratulates all who were involved with this process and offers best wishes for the continuing success of Council for Health Service Accreditation of Southern Africa.”

## **About COHSASA**

The Council for Health Service Accreditation of Southern Africa (COHSASA), a not-for-profit organisation in Cape Town, South Africa, assists a wide range of healthcare facilities to meet and maintain quality standards. This process enables the facilities to provide safe, quality services to their patients and families.

In the past 23 years of operation, COHSASA has worked in over 600 facilities in both the public and private sectors in 14 African countries including South Africa, Botswana, Swaziland, Lesotho, Namibia, Rwanda, Nigeria, Uganda, Zambia, Tanzania, The Democratic Republic of the Congo, Ghana, Egypt and Kenya. COHSASA runs programmes in hospitals, clinics, hospices, emergency medical services, environmental health offices and rehabilitation/sub-acute establishments.

There is a strong focus on building capacity. The COHSASA programme helps healthcare professionals to measure themselves against standards. This approach teaches healthcare workers how to monitor improvements using quality improvement methods, internationally accredited standards and a web-based information system.

COHSASA has achieved global recognition and is the only sub-Saharan health facility accrediting body that is accredited by the International Society for Quality in Health Care (ISQua). Since it achieved its first accreditation award from ISQua in 2002, the Council has maintained its accredited status with four further accreditations. Its current ISQua accreditation status is valid until December 2022.

COHSASA’s hospital standards are also currently accredited by ISQua until 2022.

The programme developed by COHSASA builds capacity in local organisations so that they can take ownership of the programme from the outset. Initial training is followed by a baseline assessment, where all departments in a facility are assessed against the standards. In an average hospital (+/- 100 beds) about 3,500 measurable elements are evaluated. Quality Advisors (QAs) then train and support staff in quality assurance concepts, quality improvement methods and self-evaluation so that ownership of the data and the overall programme is quickly established.

The Council has introduced a graded recognition process where incremental levels of progress in achieving compliance with standards are recognised through certification. COHSASA certifies departments within facilities and facilities that do not achieve full accreditation but have achieved acceptable and safe levels of standards compliance and service delivery. This has the effect of encouraging efforts towards full compliance with standards and institutionalising quality improvement.

The web-based electronic COHSASA Quality Information System (CoQIS) allows facility staff to have access to a continuous, easy-to-use management tool that assists them to run their establishments efficiently. CoQIS captures all the evaluation data compiled by surveyors and quality advisors during a baseline survey. This enables users to understand the baseline situation in healthcare facilities, identify deficiencies, prioritise interventions and monitor improving compliance with standards at individual facilities and across groups of them.

The information system enables personnel in healthcare facilities to have direct access to quality improvement data so that they can monitor their performance against standards. CoQIS supports on-going quality improvement programmes in all areas of healthcare facilities and enables management at all levels to make informed decisions when responding to deficiencies. CoQIS guides hospital management and clinical staff to make targeted, realistic and sustained interventions that will improve quality in a facility.

In addition to its own programmes, the Council also uses the extensive knowledge and experience of its quality advisors to support and train clients using other quality programmes such as the SafeCare Programme and the National Core Standards. The capacity building approach is used to develop skills in quality improvement and quality assurance methods, including self-evaluation against standards and developing quality improvement plans and programmes to address identified deficiencies. The level of assistance provided to clients is determined by client need.

Patient Safety is an integral part of quality health care. In 2006, the Council became the distributor for the Australian Advanced Incident Management System (AIMS) and successfully supported the implementation of a major patient safety programme in the Free State Province.

A similar electronic system, PatSIS, has been developed by the Council. The patient safety programme currently uses a call centre, located at the Council, where all reported incidents are captured into the system. As soon as the incident is captured, the information is available to the users. When the most serious incidents occur, the hospital CEO and relevant officials are immediately notified by a text message.

The users are required to manage each incident according to agreed protocols, which vary according to the severity of each incident. The process is monitored by the call centre team and by the relevant officer in the facility. The local Department of Health oversees the whole process. The setup of PatSIS can be configured to meet client needs – either with a remote or local call centre or with centralised or remote technical assistance.

The quality improvement and patient safety programmes together offer a highly efficient and effective mechanism for improving patient and staff safety. They enable staff to take responsibility for the quality of patient care and provide invaluable data for research to identify trends that can further improve the care of patients. With staff doing the right thing first time and avoiding errors, the cost effectiveness of care is also improved.

COHSASA offers its services to meet individual client needs so that healthcare facilities are equipped for the long-term to meet the safety and quality health needs of the population they serve in the most efficient and cost-effective manner possible.
